Example of Blockchain – which will be streamed live on our website

The screenshot shows the Bitcoin Block Explorer website. The browser address bar displays 'blockchain.info'. The website header includes the 'BLOCKCHAIN info' logo and navigation links for Home, Charts, Stats, Markets, API, and Wallet. A search bar is located in the top right corner.

The main content area is titled 'Home Welcome to Blockchain' and features a table of recent blocks. Below the table, there are sections for 'Latest Transactions' and a 'Search' box. At the bottom, there is a footer with links for 'About Us & Contact', 'Privacy Policy', 'Terms of Service', and a status indicator 'Ok (500 Nodes Connected)'. A dropdown menu for 'Bitcoin' is also visible.

Authorities See Worth of Bitcoin

By RYAN TRACY

Updated Nov. 18, 2013 11:56 p.m. ET

WASHINGTON—Senior U.S. law-enforcement and regulatory officials said they see benefits in tackling its risks. The price of [Bitcoin](#), the most common virtual currency, soared to a record fol

U.S. authorities gathered Monday at the first-ever congressional hearing on virtual currencies, concern the security and decentralized nature of some virtual currencies can help facilitate cr U.S. banks, who have previously highlighted the currency's role in money laundering and other service.

"The Department of Justice recognizes that many services and have the potential to promote more assistant attorney general for the department's cr Senate Homeland Security and Government Affairs

Federal Reserve Chairman Ben Bernanke, who d that virtual currencies "may hold long-term promise more secure, and more efficient payment systems

What is OneCoin?

- OneCoin is a new type of **Cryptocurrency** - a digitally created currency based on advanced mathematical algorithms
- Born out of the success of Bitcoin
- OneCoin is **not a premined currency**, the members will create the market, mine the coins, and **keep the profits!!**
- OneCoin **will** be traded on a Public Exchange
- Highly lucrative yet simple and fair compensation plan
- OneCoin can become the next successful cryptocurrency on the market

How does the algorithm work?

The algorithm for a legitimate cryptocurrency has a **FIXED or FINITE** number of solutions (called coins), unlike an illegal money game in which they make as many fake coins as they want. OneCoin's algorithm can produce exactly 2.1 billion coins.

Everything is governed by the mathematics and cannot be changed once mining begins. You could even produce a cryptocurrency with just 3 coins (solutions). In this example, all three are correct solutions to the question - what makes 5? therefore it would yield precisely 3 coins as a reward

✓ $5 = 3 + 2$

✓ $5 = 4 + 1$

✓ $5 = 5 + 0$

WHY ONECOIN – HOW DO WE CREATE VALUE FOR OUR MEMBERS?

OneCoin Value

SCARCE → Central Banks can't inflate them

DURABLE → they don't degrade

PORTABLE → can be carried and transmitted electronically

VERIFIABLE → through the block chain

EASY TO STORE → electronic, on a laptop or mobile device

FUNGIBLE → each OneCoin is equal

DIFFICULT TO COUNTERFEIT → cryptographically impossible

WHY ONECOIN IS BETTER THAN BITCOIN

1. More advanced and more secure algorithm (SCRIPT)
2. Smaller denomination makes coin more usable (2.1 Bn coins) – Bitcoin reached up to 1200 USD per coin, which made it inaccessible for many people and not practical as a currency
3. OneExchange provides due to its centralization higher liquidity and less volatility, unlike multiple Bitcoin exchanges all selling at different rates
4. Dedicated management team responsible for strategy, attracting merchants and building the OneCoin brand vs decentralized approach of Bitcoin
5. OneCoin is mined in mining pools (or teams), keeping individual investment in hardware etc. minimal
6. OneCoin uses KYC procedure and cannot be abused for illegal purposes like Bitcoin was (Bitcoin was used for buying drugs and weapons on the internet)
7. OneCoin is still in an early stage and therefore interesting for investors, while Bitcoin is already very mature – and the opportunity is over

THE MORE DIFFICULT MINING BECOMES, THE HIGHER THE PRICE OF THE CRYPTOCURRENCY

The higher the mining difficulty, the higher the coin price!

Join early for profit!
The more difficult mining,
the higher the coin price!

THE FIRST RECORDED OFFLINE BITCOIN TRANSACTION

In 2010 a man buys a Pizza for 10,000 Bitcoins.

Today this is worth around USD \$7 million.

2014 worth 10M !

This is the most expensive Pizza in the world!!!

The 7 Million USD Pizza!
